Your-Label Products

Our designers and researchers can create unique products by allowing you to decide which natural ingredients to include. We will research and verify the stability and safety of your particular combination, then grant you free exclusivity to that combination for free for the life of your account with us.

Your label can be anything from 1-color on white to full photographic design with digital effect and intricate laser-cut edges.

Healthy Product Certification

Every variation of this product must be certified by our Quality Control Unit before we will make it and after it is packaged. That means that each and every ingredient has been thoroughly researched...even the ones you choose. We stand behind every brand and every product we make.

Minimums & Packaging

Each product we make is blended by experienced technicians and researchers in an FDA-registered facility using FDA GMP's and human monitoring. Robots just aren't good enough to get this kind of quality. Ask about this product and its minimums and packaging options. Artisan blending gives you options.

CERTIFIED ORGANIC & ESSENTIAL OILS Never Petroleum-Based The choice of sources shows in the final product.

We have researched thousands of natural, organic, and essential oils to assemble a collection of only the finest, most beneficial ones. These oils are treated in a way that allows them to be absorbed quickly without feeling greasy or sticky. Most of these natural ingredients are high in natural antioxidants, omega 3-6-9 fatty acids, and other antiaging compounds. In private-labeled batches, you can select which natural ingredients you would like to have.

VISAGE FRAIS BOTANICALS Organic Extracts Made In-House Rather than use preserved extracts, we make our own.

Most extracts used in cosmetic products are less than 1% herb or spice in over 99% water. When shipped from the supplier to the manufacturer, 99% of the shipping cost is for the transportation of water and preservatives, not the natural ingredient. We buy fresh herbs and steep them cold for 2 weeks before cold processing in an all-organic method that protects complex natural molecules like chlorophyll and omega-3's. No shipping, no preservatives, and no cooking. Best of all, because we have low minimums, you can select the natural therapeutic ingredients you want to include without paying any development fees.

WATERPROOF & WEARPROOF Stays On All Day Formulated to hold water and oils inside and keep pollution outside.

The old-school way we blend this product allows us to do things huge manufacturers in China can't afford to do. They blend lotions cold so they come off at low temperatures in water. We make ours hot but not too high. Just hot enough so it will be inactive at body temperature but active several degrees higher. In English, that means it will stay on until you wash it off. Each application doesn't just replace the softness and natural oils...it compounds them.

COMPARISON SHOPPING Skin-Feel Compared To Others How are the various aspects of the product balanced?

We have designed this one to be low but still slightly noticeable on the humectants because we didn't want it to feel heavy or cushiony after drying. The lotion is very light and liquifies on contact with skin for a super-thin play-out and sheer feeling. The oils have a little body but are not sticky or greasy after the lotion has dried. After about 15 minutes, the oils have been fully absorbed into the skin and the waterproofness is firmly set but it feels as if the lotion isn't even there anymore...just soft, moist skin.

Ingredients: Aloe Vera Gel, Dioctyl Adipate, Cert. Org. Sweet Almond Oil, Cert. Org. Argan Oil, Stearic Acid, Benzyl Alcohol, Phenoxyethanol, Undecylenol Glycine, Carbomer, DEA Cetyl Phosphate, Triethanolamine, Cetyl/Stearyl Alcohol, Vitamin E Acetate.
