### *Instant Color Formulas*

All of our formulas have two options for instant color.

**Caramel Brown** is a warm brown color that lets professionals see their work while they are spraying but doesn't stain the skin or clothing. It rinses off easily leaving only the DHA tan behind.

**Hawaiian Brown** is a deep brown stain that penetrates the skin instantly giving the illusion of a lifetime on the beach. It lasts long enough for the DHA tan to develop then washes off leaving you with a tan that lasts for up to 14 days.

### *Professional Strengths*

#### *SanSol 10%*

Our basic sunless tanning solution gives a natural looking tan with the truest brown available in the professional tanning industry. Leave it on for 1 hour for a touch of color or 12-24 hours for a deeper tan.

#### *SuperShot 12%*

Our medium-strength tanning solution gives 20% darker color in less time for that deep vacation tan. The brown color is rich and warm but never brassy. Apply again 48 hours later for the deepest tan you'll ever have.

#### *UltraDeep 14%*

Want that super rich tan as if you live on a yacht? This is the one for you. The tan keeps developing for up to 36 hours for quick, long-lasting results and deep penetration with less fading.

### **POTENCY & RELIABILITY** At Economical Prices

Select from a variety of strengths and color delivery methods.

All of our sunless tanning solutions are custom made within 72 hours of your order. You will never receive product that was mass-produced and stored in a hot warehouse for months at a time. Many other tanning solutions are stabilized with chemicals and synthetic preservatives but ours is always fresh, always potent, and always available. All of our tanning solutions are available in 7 oz. mousses, 1 gallon bottles, and 5 gallon pails.

### **ALL-NATURAL RENEWABLE RESOURCES** Animal vs. Vegetable

Where does DHA come from and what is the difference?

We use two natural sources of DHA, never synthetic. The first source is farm raised animal by products which contain high levels of DHA. It's then purified and concentrated for use in foods and sunless tanners. This grade is less expensive but may not appeal to some customers. A more popular grade of DHA comes from algae, nuts, seeds, and fruit which is just as effective as the animal type but healthier for you and the environment. Though it costs a little more to make, many customers find this type of DHA to be a more attractive choice for them.

### **LONGER LASTING & LOW ODOR** Science Makes The Difference

Heavy perfumes don't reduce tanning odor. Good science does.

When DHA tans the skin it releases gases that smell like body odor. If you stop the odor you also stop the tanning. So how could you reduce the odor without slowing the tanning process? We take the tan deeper into the skin. Most tanning solutions only tan the outermost layer of the skin but we formulated our products to penetrate deeper. This makes the tan last longer and slows the release of offensive gases thereby reducing the odor. It also means that the tan won't fade as quickly or be as prone to cracking when applied repeatedly.

### **PROFESSIONAL TANNING** With Your-Label Tanners

Sell your own line of sunless tanning maintenance products.

All of our sunless tanning solutions are available in containers bearing your own label for the same price as ours. Our artists will work with your company graphics to create a beautiful full-color design that gives your customers the satisfaction of knowing that they are getting a brand they are intimately familiar with...yours.
